ND: YAG Q_Switched technology allows for the wide range of clients (all skin colour and hair colour) to be treated safely without scarring and tissue damage.

Pigmentation and birth mark reduction

The laser concentrates a burst of single wavelength light onto the skin, which is absorbed by the cells that contain excessive Melanin. This results in lightening or altogether removal of pigmentation.

No of sessions required 4-6 /session interval 4-6 weeks

One treatment session

£45.00

Set of 6 treatments

£180.00

Carbon skin rejuvenation

During this treatment a medical grade carbon lotion is applied to the cleansed skin. Which enters the pores. When the laser is applied, it heats the carbon gently which in turns kills bacteria and closes these pores as well as stimulating collagen production. This leaves the skin clear clear of congestions and looking rejuvenated.

No of sessions required 4-6 /session intervals every week

One treatment

£50.00

Set of 6 treatments

£240.00

Tattoo Removal

The Q-Switching technology into the ND-YAG applicator allows for more effective tattoo removal. The precise, quick and strong pulses shatter tattoo ink into smaller pieces, making it easier for the white blood cells to carry the fragmented pigment through the lymphatic system to be removed naturally from the body. It can also remove micro-blading eye brow tattoos.

No of sessions required 4-6/ session interval 4 weeks

Small area up 6cm²

£50.00

Set of 6 treatments

£240.00
